

Results of the Survey on Credit Conditions (ECC)

First Quarter 2022

BANCO CENTRAL
DE LA REPÚBLICA ARGENTINA

About the use of inclusive language in the Spanish version of this report

The Central Bank of Argentina is committed to encouraging the use of a non-discriminatory language that promotes the acceptance of all gender identities. It should be noted that all those who have contributed to this report acknowledge that language influences on ideas, feelings, ways of thinking, as well as principles and core values.

The Survey on Credit Conditions (ECC) is a qualitative quarterly survey conducted by the BCRA in order to gather additional information on the performance and trends observed in the bank credit market. The information obtained supplements the set of quantitative statistical data more readily available to this institution, aimed at achieving a better understanding of the factors that impact on the evolution of loans granted by the financial system

This survey is conducted on a sample of institutions consulted about the evolution of their credit supply and the demand for credit they have to face. The performance of loans to companies and to households is analyzed, focusing on any changes recorded during the quarter in progress against the immediately preceding quarter, and on any changes expected to occur in the next three months.

This report discloses the results for the first quarter of 2022, obtained from the survey conducted from March 14 to March 30.

The historical results obtained to date and the methodological details of the survey are made available to the public together with this report. To access this material, click [here](#).

Report published on April 13, 2022.

Data for the second quarter of 2022 will be published in July 2022.

The answers given by institutions do not necessarily match the vision of the Central Bank of Argentina or of its authorities.

Survey on Credit Conditions (ECC)¹

First Quarter of 2022

Companies

- During the first quarter of 2022, according to the aggregate of institutions participating in the survey, credit standards associated with loans to companies —overall— remained unchanged against the fourth quarter of 2021. This neutrality was evident in lines to large companies and for small and medium-sized enterprises (SMEs), as well as for all financing terms. In turn, no sizable changes in credit standards associated with loans to companies are anticipated for the second quarter of the current year.
- As regards the terms and conditions applied to credits approved, the aggregate of banks participating in the survey reported a slight easing for overall companies in the maximum granting amounts while the commission fees charged by the institutions went up slightly. In turn, the remaining terms and conditions of credits approved for companies did not exhibit significant changes for the aggregate of institutions over the period.
- During the first quarter of 2022, the ensemble of institutions participating in the survey reported a slight drop in the perceived demand for credit from overall companies (also extending to large companies and, to a lesser extent, to SMEs). For the second quarter of the year, the aggregate of institutions taking part in the survey anticipates a moderate rise in the perceived demand for credit in the case of overall companies and SMEs, but less intense in the case of large companies.

Households

- During the first quarter of 2022, credit standards associated with loans to households for the ensemble of institutions surveyed did not exhibit significant changes against the previous quarter, except for pledge-backed loans, which eased moderately. For the second quarter of the year, the institutions anticipate a moderate easing of credit standards for cards and a slight tightening for other loans for consumption.
- As regards the terms and conditions applicable to loans approved, the aggregate of institutions participating in the survey reported an easing (increase) in the maximum amounts for all credit lines, even though with different levels of intensity. In turn, the spreads on the cost of funding tightened (increased) slightly for mortgage and pledge-backed loans. Commission fees for credit cards went up significantly over the period (the standards tightened) but remained unchanged for other credit lines. Financing terms and guarantees/collaterals did not exhibit significant changes, except for pledge-backed loans, which eased moderately.
- Based on the answers provided by the aggregate of institutions, during the first quarter of 2022, the demand for credit did not post significant changes in most credit lines to households (except for cards, where the demand went up moderately). For the second quarter of 2022, the institutions anticipate a rise in credit demand in almost all lines to households (except for mortgage lines, which would remain unchanged).

¹ This report contains the main results of each quarterly survey conducted by the BCRA to financial institutions. This survey reports the institutions' vision on the evolution of the banking credit market. For any further analysis, that may give context to these results with the aggregate evolution of the ensemble of institutions of the financial system and with the main measures adopted by the BCRA in terms of financial policy, see the various issues of the [Report on Banks](#) and the [Financial Stability Report](#).

1. Loans to Companies

Supply – Credit Standards / Terms and Conditions

1.1 During the first quarter of 2022, the ensemble of institutions participating in the survey reported a neutral position (unchanged) in terms of the credit standards related to loans to overall companies against the figures of the immediately preceding quarter. The Diffusion Index (DI)² was 2.8%³ (see Chart 1 and Annex). This neutrality extended to companies of all sizes (small and large) as well as to all financing terms.

1.2 During the first quarter of 2022, and considering the terms and conditions applied to credits approved for overall companies, the aggregate of institutions participating in the survey reported a slight easing in the maximum granting amounts (which was more intense in large companies). In turn, the spreads on the cost of funding remained

² Based on answers obtained when conducting the ECC survey, indicators are built that serve to become aware of the market main trends in aggregate. Particularly, the so-called Diffusion Index (DI) is prepared as a global indicator of evolution of the variable under analysis, built as the difference between the percentage of answers showing a positive evolution (answers "Moderately more easing" and "More easing") minus the percentage of negative answers ("Moderately more tightening" and "More tightening"). This index weights the answers taking into account each institution's share in the stock of credit (of the sample of surveyed banks), and the intensity of the response (0.5 factor for "Moderately ..." answers, and 1 for "More..." answers). DIs may obtain values within a -100 / +100 range.

³ In general, DIs (in absolute values) lower than or equal to 5 are considered to be an "unchanged" or "neutral" condition, values from 5 to 10 are considered to be "slightly" changed or biased condition; from 10 to 20, "moderately" changed; from 20 to 50 "significantly" changed and over 50, "widely diffused".

unchanged for overall and large companies, though a moderate easing was reported in the case of SMEs. In turn, commission fees charged by the institutions went up slightly over the period, while granting terms and guarantee/collateral requirements did not exhibit significant changes (for companies of all sizes) (see Chart 2).

Chart 2 | Overall companies. Terms and Conditions
Diffusion Index weighted by institution and by answer - In %

1.3 On the basis of the answers received, the aggregate of participating institutions does not anticipate changes in terms of credit standards associated with loans to companies for the second quarter of 2022 (DI for overall companies of 0.4%; see Chart 1). This context of neutrality would extend to companies of all sizes and to all financing terms.

Perceived Demand

1.4 During the first quarter of 2022, the aggregate of the participating institutions reported a moderate drop in the perceived credit demand of overall companies (DI for overall companies of -11.3%; see Chart 3), against the previous quarter. This evolution mainly resulted from higher interest rates and lower investments in fixed assets. The drop in credit demand extended to large companies and, to a lesser extent, to SMEs.

Chart 3 | Companies. Evolution of credit demand
Diffusion Index weighted by institution and by answer - In %

1.5 Based on the answers received, the aggregate of the institutions surveyed expects a moderate increase in credit demand in the case of overall companies during the second quarter of 2022 (DI of 12.7%), and this situation would extend to companies of all sizes (even though with different levels of intensity).

2. Loans to Households

Supply – Credit Standards / Terms and Conditions

2.1 During the first quarter of 2022, the aggregate of institutions surveyed pointed out that credit standards associated with credit lines channeled to households did not exhibit significant changes against the previous quarter, except for pledge-backed loans, which eased moderately (see Chart 4).

Chart 4| Households. Credit Demand Evolution

Diffusion Index weighted by institution and by answer - In %

2.2 With reference to the terms and conditions of the credit lines approved to households, the evolution of these credit lines was heterogeneous during the first quarter of the year. On the one hand, maximum amounts eased (increased) for all credit lines, though with different levels of intensity. On the other, the spreads on the cost of funding went up moderately for mortgage and pledge-backed loans, but remained unchanged for cards and other loans for consumption. In turn, commission fees on credit cards increased significantly over the period (the standard has tightened) but remained unchanged in the remaining credit lines. Financing terms and guarantee/collateral requirements did not exhibit significant changes, except for pledge-backed loans, which eased moderately (see Chart 5).

Chart 5 | Households. Evolution of the Terms and Conditions
Diffusion Index weighted by institution and by answer - In %

2.3 The aggregate of banks surveyed anticipates that, in the second quarter of 2022, the standards for approval of credit cards would ease moderately, but they would tighten slightly in other loans for consumption and would remain in a neutral position in the remaining credit lines (see Chart 4).

Perceived Demand

2.4 Based on the answers received, the aggregate of banks surveyed perceived that, in the first quarter of 2022, credit demand did not post significant changes in most lines channeled to households, except for cards, where it went up moderately (DI of 14.7%; see Chart 6).

2.5 For the second quarter of 2022, the ensemble of institutions participating in the survey anticipates a significant rise in the demand for other loans for consumption and for cards and, to a lesser extent, for pledge-backed loans. With reference to mortgage loans, no significant changes in demand are expected.

Chart 6 | Households. Evolution of credit demand
