

Results of the Survey on Credit Conditions (ECC)

Fourth Quarter 2021

BANCO CENTRAL
DE LA REPÚBLICA ARGENTINA

About the use of inclusive language in the Spanish version of this report

The Central Bank of Argentina is committed to encouraging the use of a non-discriminatory language that promotes the acceptance of all gender identities. It should be noted that all those who have contributed to this report acknowledge that language influences on ideas, feelings, ways of thinking, as well as principles and core values.

The Survey on Credit Conditions (ECC) is a qualitative quarterly survey conducted by the BCRA in order to gather additional information on the performance and trends observed in the bank credit market. The information obtained supplements the set of quantitative statistical data more readily available to this institution, aimed at achieving a better understanding of the factors that impact on the evolution of loans granted by the financial system

This survey is conducted on a sample of institutions consulted about the evolution of their credit supply and the demand for credit they have to face. The performance of loans to companies and to households is analyzed, focusing on any changes recorded during the quarter in progress against the immediately preceding quarter, and on any changes expected to occur in the next three months.

This report discloses the results for the fourth quarter of 2021, obtained from the survey conducted from December 20 of 2021 to January 6 of 2022.

The historical results obtained to date and the methodological details of the survey are made available to the public together with this report. To access this material, click [here](#).

Report published on January 20, 2022.

Data for the first quarter of 2022 will be published in April 2022.

The answers given by institutions do not necessarily match the vision of the Central Bank of Argentina or of its authorities.

Survey on Credit Conditions (ECC)

Fourth Quarter 2021

Companies

- During the fourth quarter of 2021, according to the aggregate of institutions participating in the survey, credit standards associated with loans to companies – overall and large— remained unchanged against the previous quarter but, in the case of SMEs, standards eased slightly (a bias in line with the figures recorded since late 2020). In turn, for the first quarter of 2022, the ensemble of banks anticipates a neutral scenario for companies of all sizes and for all financing terms.
- As regards the terms and conditions applied to credits approved for companies, the aggregate of institutions indicated a slight easing (for overall companies) in the spreads on the cost of funding, commission fees and maximum granting amounts. In turn, the remaining terms and conditions of credits approved for companies did not post changes during the period.
- During the last quarter of 2021, according to the ensemble of banks participating in the survey, the perceived demand for credit from companies (overall and large companies) remained unchanged (after two consecutive quarters of demand contraction) with a bias towards a slight increase in demand from SMEs. For the first quarter of 2022, the aggregate of institutions taking part in the survey anticipates a moderate increase in credit demand from companies, which would be widespread across companies of all sizes.

Households

- During the fourth quarter of 2021, according to the ensemble of banks surveyed, credit standards of household lines remained unchanged against the previous quarter in the case of mortgage and pledge-backed loans but eased in the case of cards and other loans for consumption (though with different levels of intensity). For the first quarter of 2022, the institutions do not anticipate changes in such standards, except for credit cards which would ease moderately.
- As regards the terms and conditions applicable to loans approved, during the last quarter of 2021, the ensemble of institutions participating in the survey kept a moderate easing in the maximum amounts for cards and, with a lesser intensity, for other loans for consumption. In turn, spreads on other loans for consumption eased moderately but they tightened slightly in the case of pledged-backed loans. Lastly, commission fees for credit cards tightened (increased) moderately during the period.
- During the fourth quarter of 2021, the aggregate of institutions perceived a rise in demand (though with different levels of intensity) in most household credit lines (except for mortgage loans, which remained unchanged). For the first quarter of 2022, the institutions anticipate that this bias will remain unchanged.

1. Loans to Companies

Supply – Credit Standards / Terms and Conditions

1.1 During the last quarter of 2021, the ensemble of institutions participating in the survey reported in their answers a neutral position (unchanged) in terms of the credit standards related to loans to companies against the previous quarter. The Diffusion Index (DI)¹ stood at 2.6%² for overall companies (see Chart 1 and Annex). This neutrality was also observed in large companies while, in small and medium-sized enterprises (SMEs), there was a slight easing, in line with the bias observed since late 2020.

Chart 1 | Companies. Credit Demand Evolution

Diffusion Index weighted by institution and by answer - In %

1.2 Considering the terms and conditions applied to credit lines for companies, during the last quarter of 2021, the ensemble of institutions participating in the survey reported – for overall companies– a slight easing in the spreads on the cost of funding (which was more intense in the case of large companies), in commission fees charged by the

¹ Based on answers obtained when conducting the ECC survey, indicators are built that serve to become aware of the market main trends in aggregate. Particularly, the so-called Diffusion Index (DI) is prepared as a global indicator of evolution of the variable under analysis, built as the difference between the percentage of answers showing a positive evolution (answers "Moderately more easing" and "More easing") minus the percentage of negative answers ("Moderately more tightening" and "More tightening"). This index weights the answers taking into account each institution's share in the stock of credit (of the sample of surveyed banks), and the intensity of the response (0.5 factor for "Moderately ..." answers, and 1 for "More..." answers). DIs may obtain values within a -100 / +100 range.

² In general, DIs (in absolute values) lower than or equal to 5 are considered to be an "unchanged" or "neutral" condition, values from 5 to 10 are considered to be "slightly" changed or biased condition; from 10 to 20, "moderately" changed; from 20 to 50 "significantly" changed and over 50, "widely diffused".

institutions and in the maximum amounts for loan granting (see Chart 2). In turn, the maximum terms for loan granting remained unchanged for overall and large companies, while they eased slightly in the case of SMEs. Requirements for guarantees/collaterals did not post significant changes over the quarter.

Chart 2 | Overall companies. Terms and Conditions
Diffusion Index weighted by institution and by answer - In %

1.3 According to the answers provided, the aggregate of the participating banks would not make changes to credit standards associated with loans to companies during the first quarter of 2022 (DI for overall companies of 0%) (see Chart 1). This scenario would replicate in companies of all sizes and for all financing terms.

Perceived Demand

1.4 During the fourth quarter of 2021, the aggregate of the participating institutions reported a neutral bias in the perceived credit demand of companies against the immediately preceding quarter (DI for overall companies of 0.3%; see Chart 3), after falling for three consecutive quarters. If companies are broken down by size, credit demand went up slightly among SMEs (DI of 6.2%) but it remained without significant changes (DI of -0.1%) in the case of large companies during the last quarter of 2021.

Chart 3 | Companies. Evolution of credit demand
Diffusion Index weighted by institution and by answer - In %

1.5 Based on the answers received, the aggregate of the institutions surveyed expects a moderate increase in credit demand in the case of overall companies for the first quarter of 2022 (DI of 13.9%), a situation that would replicate in companies of all sizes.

2. Loans to Households

Supply – Credit Standards / Terms and Conditions

2.1 During the last quarter of 2021, the aggregate of institutions surveyed pointed out a moderate easing of credit standards associated with cards and, with a lesser intensity, with other loans for consumption. In turn, no changes (neutrality) were observed in the credit standards for mortgage and pledged-back loans (see Chart 4).

Chart 4 | Households. Credit Demand Evolution

Diffusion Index weighted by institution and by answer - In %

2.2 The aggregate of the participating banks reported that, in relation with the terms and conditions of the loans approved to households over the last quarter of 2021, spreads eased moderately on other loans for consumption but tightened slightly on pledge-backed loans and remained unchanged on the remaining credit lines to households. In turn, commission fees charged by the institutions increased moderately for cards, while the standards on maximum loan granting eased moderately for cards and slightly for other

Chart 5 | Households. Evolution of the Terms and Conditions

Diffusion Index weighted by institution and by answer - In %

loans for consumption. The remaining concepts did not exhibit significant changes over the period (see Chart 5).

2.3 The aggregate of banks surveyed anticipates that, in the first quarter of 2022, the standards for approval of most credit lines would remain unchanged (neutral), except for credit cards, which would ease moderately (see Chart 4).

Perceived Demand

2.4 The aggregate of banks surveyed perceived that, in the last quarter of 2021, there was an increase in the demand of most lines channeled to households (except for mortgage loans, which remained unchanged), with a higher level of intensity in credit cards and other loans for consumption (see Chart 6). This evolution was mainly related to the rise in households' consumption, a higher income and/or job opportunities, and more attractive interest rates.

2.5 For the first quarter of 2022, the ensemble of institutions participating in the survey anticipates a rise in households' credit demand, with a higher level of intensity in credit cards transactions and other loans for consumption. With reference to mortgage loans, no changes are expected.
